

JOSEPH JAMES

Fullstack Developer · Forex Trader · Founder — “JJ ONYX”

Addis Ababa, Ethiopia · Dubai operations · jj@onyx.studio · jjonyx.dev

Eighteen-year-old fullstack developer, forex trader and live streamer. Founder of an IT studio building real-time platforms from Addis Ababa outward: a seven-portal restaurant ERP running live kitchen operations in Dubai, an AI attendance platform protecting students in Ethiopian schools, an AI-powered national exam-prep academy, and a browser-to-RTMP trading and broadcast command center. Comfortable across the whole stack — TypeScript, React/Next.js, Node, PostgreSQL and Convex — with a trader's instinct for latency, risk and real-time data.

Selected Projects & Experience

Founder & Lead Engineer — TG's Restaurant ERP

Delivery-only Ethiopian restaurant, Dubai · 2024

- Built and operate a real-time multi-portal ERP: customer webapp, WhatsApp voice-order queue, Kitchen Display, Chef / Waiter / Cashier / Manager portals, lottery engine and automated Drive backups.
- Unified all surfaces through one Socket.IO event bus — a voice note becomes a structured kitchen ticket in under a second; zero lost tickets in production.
- Stack: pnpm monorepo, React + Vite, Express, PostgreSQL (Supabase), Socket.IO, JWT RBAC, Twilio Voice, Google Drive API, Render.

Founder & Engineer — ATTENDX (AI Attendance & Student Safety)

Ethiopian schools pilot · 2024

- Multi-modal check-in (AI face recognition, QR, fingerprint) feeding a live analytics dashboard with absenteeism pattern detection.
- Automated parent SMS within five seconds of arrival; encrypted credentials and role-based access for student data.

Creator & Engineer — JJ NEXUS PRO (Trading & Streaming Platform)

Personal production system · 2024

- Browser-to-RTMP broadcast pipeline (FFmpeg), phone-camera PWA input, GitHub Codespaces cloud streaming, and unified market-data proxies.
- COT Order Flow research module implementing quantitative positioning models used on live streams.

Founder & Engineer — Learnyx Academy (AI Exam Prep)

Grade 9–12, Ethiopian national curriculum (EHEEE) · 2025

- Groq-powered AI tutor, LiveKit study rooms, quizzes, flashcards and an XP achievement system on a freemium model.
- Stack: Vite + React + TypeScript, Convex, Cloudflare R2, Render.

Skills

Engineering: TypeScript, React, Next.js, Node + Express, Socket.IO, WebSocket, JWT/RBAC

Data & Infra: PostgreSQL, Supabase, Convex, Cloudflare R2, Render, Google Drive API, Twilio

AI: Groq LLM integration, face recognition pipelines, realtime analytics

Trading: Market structure, COT positioning analysis, risk management, prop-firm discipline

Media: FFmpeg/RTMP pipelines, OBS-equivalent browser broadcasting, live stream production

Education & Languages

Secondary education — Ethiopian national curriculum

Grade 12 · balancing final-year studies with live products in production

Languages: Amharic (native) · English (fluent) · Nigerian Pidgin (conversational)
